La costa adriatica ospita una delle conurbazioni lineari più estese d'Europa, sebbene con alcune interruzioni come il monte San Bartolo o il monte Conero. Tale insediamento è diverso dallo sprawl padano, o dell'hinterland napoletano, ma pur sempre espressione di una «(non più) città» koolhaasiana. La scuola di Pescara ha studiato appunto questo tipo di città "brutta, sporca e cattiva" guardando all'opera di antichi e nuovi maestri, da Luigi Moretti a Steven Holl, cercando di comprenderne le logiche invece di rifiutarle a priori. In questo scenario, Giovanni Vaccarini si è distinto come uno dei più eleganti e pragmatici interpreti di tale linea adriatica, sapendo integrare istanze vernacolari, artistiche ed ecologiche all'interno delle proprie architetture tutte poste lungo la fascia costiera, dalla centrale Powerban di Russi, vicino Ravenna, all'edificio residenziale Riviera 107 di Pescara.

The augmented window.

The envelope is comprised of a triple layer of glass (hot chamber) added to which is a fourth layer with a ventilated chamber containing the package of micro-perforated Venetian blinds to regulate the light. Brise-soleil screens made of screen-printed glass are anchored on the outside, giving the façade's external surface a variable modular pattern in terms of both the panel dimensions and the design on their surface. The screen-printed graphic element on the screening panels helps to emphasize the reverberation effect produced, softening the perimeter surface of the building in a sort of evanescent and bright "nebula," as Giovanni Vaccarini defines it. At night the glass panels are lit by white LED lights that bring the architectural block to life and make it shimmer, in dialogue with the nighttime urban landscape in which it is set.

Time and movement.

The façade system is defined by simple rules which, through their repetition, produce a complex design of elements that varies with time and with the light conditions. The architect was inspired by the principles of Kandinsky, identifying the time variable and his capacity to achieve a scanning of the surfaces as capable of defining the compositional rhythm that shifts one's perception of the architectural volume.

"Weaving is the first step in composing... the weaving is a rhythm of signs, an abstraction of meanings, figures and suggestions."
Giovanni Vaccarini

Ravenna

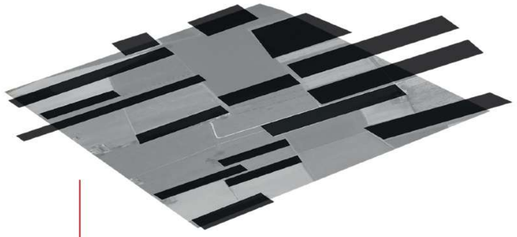

The entire area extends for 47 hectares; 28 hectares have been reconnified and Renaturalized

The margins of the intervetion constitute the interface between the rural and the industrial world

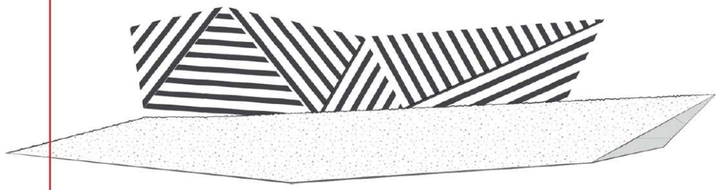

The edges of the intervention consist of embankments of variable height (between three and ten meters)

The signs and materials of the intervention are of agricultural origin and they’ re a tribute to rural architecture

The razzle dazzle technique is used for the conceptual decomposition of the mass of the building

The envelope consists of a multifaceted surface in which the wooden structure is placed on a metallic structure
